32. (NEW) An attachment structure of a motor of a toy, comprising:
a motor attachment plate, hooking on one side to a rotational shaft attached to a base body of the toy to rotate into open and closed positions, attachable to/detachable from the base body on an opposing side, and serving as a heat sink.

33. (NEW) A toy having a motor containing part, comprising:
a motor clip hooked on a shaft approximately parallel to a rotational shaft of a motor, pivoting to open and close the motor containing part, being attachable to/detachable from the base body and serving as a heat sink.

34. (NEW) A racing vehicle toy comprising:
a motor clip, hooking on one side to a shaft to pivot to open and close a motor containing part of a base body of the toy, demountably attached to the base body, and serving as a heat sink.

REMARKS

This Preliminary Amendment is submitted to improve the form of the claims and to provide a varying scope for the invention.

It is respectfully requested that this Preliminary Amendment be entered in the above-referenced application.

If there are any additional fees associated with filing of this Preliminary Amendment,

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE CLAIMS:

Please AMEND claims 1-2, 4-6, 8-10 and 12-13, CANCEL claims 3 and 11 without prejudice or disclaimer, and ADD new claims 14-34 as follows:

1. (ONCE AMENDED) An attachment structure [for] of a motor [for] of a toy, [for setting] to set a motor in a motor containing part provided in a base body of [a] the toy, the attachment structure comprising:
a motor holding plate [capable of turning] to swing on a predetermined rotational shaft [line] attached to the base body, the motor holding plate [capable of taking up] to take an open position [for opening] to open the motor containing part and a closed position [for closing] to close the motor containing part by the [turn] swing, the motor holding plate holding a body part of the motor set in the motor containing part at the closed position, and the motor holding plate comprising an engaging portion which [is capable of engaging with] engages an engage portion provided on the base body [with elasticity of the engaging portion or the engage portion] when the motor holding plate is disposed at the closed position, wherein the motor holding plate also serves as a radiation plate.
2. (ONCE AMENDED) The attachment structure [for] of the motor [for] of the toy as claimed in claim 1, wherein the rotational shaft [line] is parallel to a shaft of the motor set in the motor containing part, and the engage portion is provided on a position which is an opposite side of the motor containing part with respect to the rotational shaft line.
3. Cancelled. [The attachment structure for motor for toy as claimed in claim 1 or claim 2, wherein the motor holding plate serves as a radiation plate.]
4. (ONCE AMENDED) The attachment structure [for] of the motor [for] of the toy as claimed in claim 1 or claim 2, wherein the motor is a DC motor where terminals are provided on a rear side and a body part, the motor containing part is provided with conductive pieces which are electrically connected to each of the terminals of the motor, and when the motor is fitted in the motor containing part, the corresponding conductive piece is electrically connected to each of the terminals.

5. (ONCE AMENDED) The attachment structure [for] of the motor [for] of the toy as claimed in claim 1 or claim 2, wherein the motor is a DC motor where terminals are provided on a rear side and a body part, the motor containing part is provided with a conductive piece which is electrically connected to the terminal on the rear side of the motor, the motor holding plate is made of conductive material so as to be electrically connected to the terminal on the body part of the motor, the conductive piece is electrically connected to the terminal on the rear side of the motor when the motor is fitted in the motor containing part, and when the motor holding plate is moved to the closed position while the motor is set in the motor containing part, the motor holding plate is electrically connected to the terminal on the body part of the motor.

6. (ONCE AMENDED) A toy comprising:
a base body provided with a battery containing part [for containing] to contain a battery and a motor containing part [for containing] to contain a cylindrical motor; and
[the cylindrical motor contained in the motor containing part; and]
a motor holding member [capable of turning] to swing on a shaft approximately parallel to a rotational shaft of the cylindrical motor, the motor holding member [capable of taking up] to take an open position [for opening] to open the motor containing part and a closed position [for closing] to close the motor containing part by the [turn] swing, and the motor holding member comprising an engaging portion [which is capable of elastically engaging] to engage with an engage portion provided on the base body while the engaging portion holds an exposed peripheral portion of the motor set in the motor containing part at the closed position, wherein the motor holding plate also serves as a radiation plate.

7. (UNAMENDED) The toy as claimed in claim 6, wherein the motor containing part of the base body is provided with a first electrode piece connected to one electrode of the battery at one position with which a peripheral body part of the motor is brought into contact and a second electrode piece connected to another electrode of the battery at a different position which is insulated to the one position, the motor is a DC motor, and at least a portion of the peripheral body part serves as one of positive and negative terminals of the motor.

8. (TWICE AMENDED) The toy as claimed in claim 7, wherein a rear side of the motor is provided with the other of the positive and negative terminals of the motor, and the motor [can be] is contained in the motor containing part such that the peripheral body part is connected to the first electrode piece while the rear side is connected to the second electrode piece.

9. (TWICE AMENDED) A racing vehicle toy comprising:
an attachment structure [for] of a motor [for] of the toy, the attachment structure [for setting] to set a motor in a motor containing part provided in a base body of [a] the toy, the attachment structure comprising a motor holding plate [capable of turning] to swing on a predetermined rotational shaft [line] attached to the base body,
wherein the motor holding plate [is capable of taking up] takes an open position [for opening] to open the motor containing part and a closed position [for closing] to close the motor containing part by the [turn] swing, the motor holding plate holds a body part of the motor set in the motor containing part at the closed position, and the motor holding plate comprises an engaging portion [which is capable of engaging with] to engage an engage portion provided on the base body [with elasticity of the engaging portion or the engage portion] when the motor holding plate is disposed at the closed position, and wherein the motor holding plate also serves as a radiation plate.

10. (TWICE AMENDED) The racing vehicle toy as claimed in claim 9, wherein the rotational shaft [line] in the attachment structure [for] of the motor [for] of the toy is parallel to a shaft of the motor set in the motor containing part, and the engage portion is provided on a position which is an opposite side of the motor containing part with respect to the rotational shaft line.

11. Cancelled. [The racing vehicle toy as claimed in claim 9, wherein the motor holding plate serves as a radiation plate.]

12. (ONCE AMENDED) The racing vehicle toy as claimed in claim 9, wherein the motor is a DC motor where terminals are provided on a rear side and a body part, the motor containing part is provided with conductive pieces which are electrically connected to each of the terminals of the motor, and when the motor is fitted in the motor containing part, the corresponding conductive piece is electrically connected to each of the terminals.

13. (TWICE AMENDED) The racing vehicle toy as claimed in claim 9, wherein the motor is a DC motor where terminals are provided on a rear side and a body part, the motor containing part is provided with a conductive piece which is electrically connected to the terminal on the rear side of the motor, the motor holding plate is made of conductive material [so as] to be electrically connected to the terminal on the body part of the motor, the conductive piece is electrically connected to the terminal on the rear side of the motor when the motor is fitted in the motor containing part, and when the motor holding plate is moved to the closed position while the motor is set in the motor containing part, the motor holding plate is electrically connected to the terminal on the body part of the motor.

14. (NEW) The attachment structure of claim 1, wherein the motor holding plate comprises a material having a high radiation effect.

15. (NEW) The attachment structure of claim 14, wherein the material is a metal.

16. (NEW) The attachment structure of claim 15, wherein the metal comprises at least one of copper and aluminum.

17. (NEW) The attachment structure of claim 1, wherein the motor holding plate has a form with a high radiation effect.

18. (NEW) The attachment structure of claim 17, wherein the motor holding plate comprises at least one of a metal and a synthetic resin and further comprises an aperture formed therein, to have a high radiation effect.

19. (NEW) The toy of claim 6, wherein the motor holding plate comprises a material having a high radiation effect.

20. (NEW) The toy of claim 19, wherein the material is a metal.

21. (NEW) The toy of claim 20, wherein the metal comprises at least one of copper and aluminum.

22. (NEW) The toy of claim 6, wherein the motor holding plate has a form with a high radiation effect.

23. (NEW) The toy of claim 22, wherein the motor holding plate comprises at least one of a metal and a synthetic resin and further comprises an aperture formed therein, to have a high radiation effect.

24. (NEW) The racing vehicle toy of claim 9, wherein the motor holding plate comprises a material having a high radiation effect.

25. (NEW) The racing vehicle toy of claim 24, wherein the material is a metal.

26. (NEW) The racing vehicle toy of claim 25, wherein the metal comprises at least one of copper and aluminum.

27. (NEW) The racing vehicle toy of claim 9, wherein the motor holding plate has a form with a high radiation effect.

28. (NEW) The racing vehicle toy of claim 27, wherein the motor holding plate comprises at least one of a metal and a synthetic resin and further comprises an aperture formed therein, to have a high radiation effect.

29. (NEW) The attachment structure of the motor of the toy of claim 1, wherein the engaging portion of the motor holding plate elastically engages the engage portion of the base body.

30. (NEW) The toy of claim 6, wherein the engaging portion of the motor holding plate elastically engages the engage portion of the base body.

31. (NEW) The racing vehicle toy of claim 9, wherein the engaging portion of the motor holding plate elastically engages the engage portion of the base body.

32. (NEW) An attachment structure of a motor of a toy, comprising:
a motor attachment plate, hooking on one side to a rotational shaft attached to a base body of the toy to rotate into open and closed positions, attachable to/detachable from the base body on an opposing side, and serving as a heat sink.

33. (NEW) A toy having a motor containing part, comprising:
a motor clip hooked on a shaft approximately parallel to a rotational shaft of a motor, pivoting to open and close the motor containing part, being attachable to/detachable from the base body and serving as a heat sink.

34. (NEW) A racing vehicle, toy comprising:
a motor clip, hooking on one side to a shaft to pivot to open and close a motor containing part of a base body of the toy, demountably attached to the base body, and serving as a heat sink.
